Check B

$$UD_i = \{s \in S_i \mid s \text{ is not strictly dominated}\}$$

$$B_i = \{s \in S_i \mid \exists \sigma \in \Delta S_{-i} \text{ such that } s \text{ is a best response to } \sigma\}$$

In our hide and seek game:

$$UD_i = \{A, B\} \forall i \in \{1, 2\}$$

and

$$B_i = \{A, B\} \forall i \in \{1, 2\}$$

$$UD_i = \{s \in S_i \mid s \text{ is not strictly dominated}\}$$

$$B_i = \{s \in S_i \mid \exists \sigma \in \Delta S_{-i} \text{ such that } s \text{ is a best response to } \sigma\}$$

In our hide and seek game:

$$UD_i = \{A, B\} \forall i \in \{1, 2\}$$

and

$$B_i = \{A, B\} \forall i \in \{1, 2\}$$

Theorem:

In a 2 player normal form game $B_i = UD_i$ for all $i \in \{1, 2\}$.
